#### MONTANA EMPLOYMENT AND LABOR FORCE

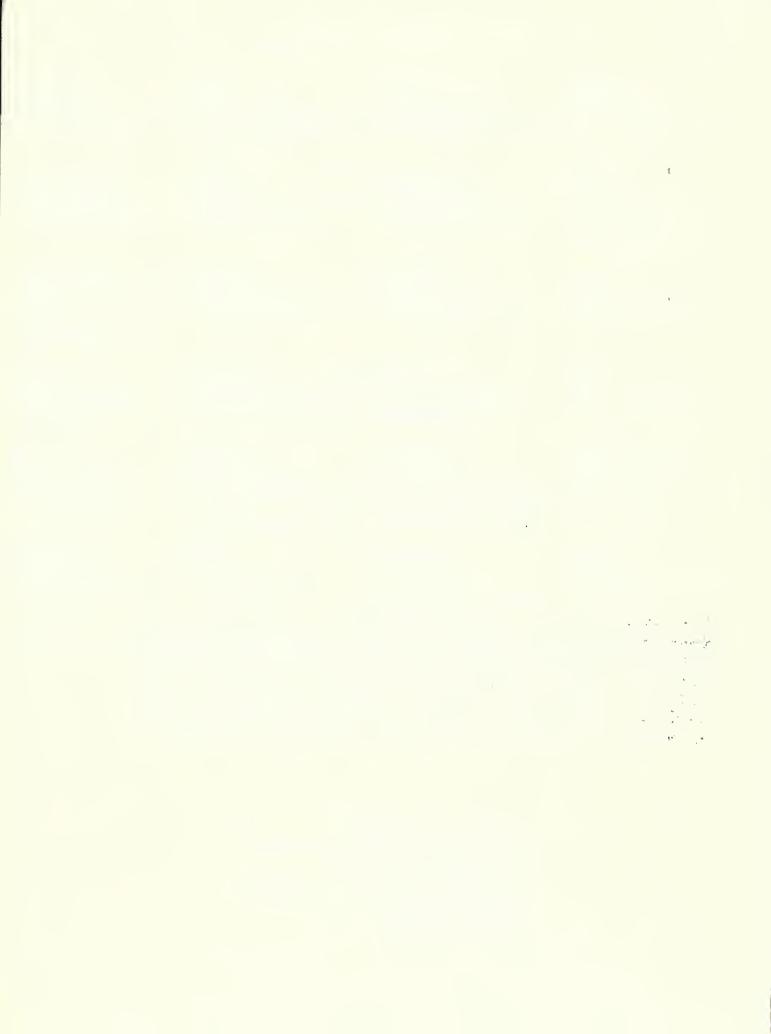

Quarterly Report 3rd. Qtr. 1986

STATE OF MONTANA
TED SCHWINDEN, GOVERNOR

Department of Labor and Industry
Eugene Huntington, Commissioner

All statistics for labor force employment, unemployment, and unemployment rates contained in this publication are in accordance with the Federal guidelines as established by the Bureau of Labor Statistics. Methodology procedures use a household sample conducted in Montana on a monthly basis which is called the Current Population Survey. These official statistics are used to allocate Federal funds and to determine eligibility for Federal assistance programs.

Volume 16 - Number 3

#### STATE OF MONTANA

P.O. Box 1728

Dear Reader:

The purpose of this publication is to report labor market information for the state of Montana. Economic conditions in Montana are highlighted in narrative form and in statistical tables.

Most of the information is obtained through surveys of the population and employers in federal-state cooperative programs. Other sources of information include administrative records, selected economic indicators, and nationally collected statistics.

I am sure this publication will be useful to you. Any suggestions or comments for improvements are always welcome.

Sincerely,

Bob Rafferty, Chief

Research & Analysis Bureau

BR:bc

#### GLOSSARY OF TERMS

- Civilian Labor Force the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.
- 2. Employed those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.
- 3. Unemployed the number of persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).
- 4. Unemployment Rate the number of unemployed expressed as a percent of the civilian labor force.
- 5. Residence Data a count of people by where people live.
- 6. Establishment Data a count of jobs by where people work.
- 7. Seasonally Adjusted Labor Force Series to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed using the X-11 ARIMA method of seasonal adjustment. This is the same method used by the Bureau of Labor Statistics to seasonally adjust the national labor force series.
- 8. MSA Metropolitan Statistical Area as determined by the Office of Management and Budget. The MSA must have a central city with a population of 50,000 or more.
- 9. <u>LFA</u> Labor Force Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding (t).
- 10. SDA The Job Training Partnership Act (JTPA) was established to replace CETA in job search, placement, relocation, and especially training assistance. Each state designs local plans for JTPA programs through a Private Industry Council (PIC). Each PIC jurisdiction is known as Service Delivery Area (SDA). The two SDA's for Montana are known as Rural CEP (Beaverhead, Broadwater, Deer Lodge, Granite, Jefferson, Lewis & Clark, Madison, Meagher, Powell, and Silver Bow counties) and Balance of State (the other 46 counties).
- 11. BENCHMARKING It is a continuous process of establishing a new set of data which affects the series of estimates through revisions. Once a new benchmark is established, the adjustments to estimates between the new benchmark and the preceding one are carried forward progressively to the current month by use of sample trends. The benchmark is established less frequently (usually once a year) based on sample or secondary data. In case of employment data, the benchmark is used to establish the level of employment, while the sample is primarily used to measure the month to month changes in the level. 12. CES-790 Program current employment statistics survey produces monthly estimates of a wide variety of employment and earnings information for the nation and each state.

#### Montana Employment and Unemployment Situation (In Thousands)

*	SEP. 1986 Prelim	AUG. 1986 Revised	JUL. 1986 Revised	SEP. 1985 Revised
Civilian Labor Force	401.5	411.5	414.1	409.0
Employment	375.1	384.7	384.1	384.0
Unemployment	26.4	26.8	30.1	25.0
Unemployment Rate	6.6%	6.5%	7.3%	6.1%

#### Economic Highlights and Employment Outlook:

Montana's unemployment rate for the third quarter averaged 6.8 percent which is slightly higher than last years third quarter rate of 6.4 percent. Total employment in September 1986 was 8,900 less than September 1985, while the unemployment count increased by only 1,400 in the same period.

The non-farm payroll employment, as determined by surveyed employers showed a continued decline as non-farm wage and salary jobs averaged 7,300 less than the third quarter of the previous year. Employment in the service industry was the only industry that did not show a major change in employment when compared with the same time period in 1985.

Montana is one of ten states that experienced a decline in non-farm payroll employment between August 1986 and August 1985. The states bordering Montana, except South Dakota, also experienced a decrease in employment. South Dakota's employment increase was a modest 0.2 percent. The states that reported the largest percent gain in employment are Arizona, Nevada, Tennessee, and Virginia.

Agriculture production in Montana made some improvements in 1986 compared to the previous year. In wheat production, Montana moved from 14th place to third in the nation, plus the state saw improvements in other field crops such as seed potatoes and sugar beets. One factor contributing to the increase was the non-drought conditions that the State experienced this year. Other long term benefits to the agriculture industry was the signing of a \$11.6 million contract for Montana's wheat and barley with a trade mission from the Republic of China (Taiwan).

Although agriculture production made vast improvements, the grain prices for the months of August and September were reported to be the lowest since the fall of 1977. The Farmers Home Administration reported that the amount of emergency loans in 1986 nearly doubled last year's total and was 3 1/2 times more than 1984 loans. Late fall floods in north central and eastern Montana caused crop and other damage to hundreds of farmers and ranchers - Blaine and Phillips counties were declared disaster areas.

Lower gasoline prices and the opening of the World's Fair in Vancouver favored a strong tourism flow into Montana. The projected increase did not materialize. However, the 1986 season did show a big improvement over 1985 season, according to reports from the state travel bureau and tourist related industries.

The Flathead business community will offer at least \$40,000 worth of incentives to film producers to produce a Christmas one-hour television special that will be filmed in the Glacier National Park and Flathead Valley area to promote Montana. The show will be broadcast on one of the major television networks, with an expected audience of 30 to 40 million viewers.

A coal-supply contract to supply 700,000 to 1.2 million tons a year to a new power plant in Minnesota was signed in August. The 20-year contract is eligible for a one-third reduction in the state's 30 percent coal severance tax. The coal company notes that the contract would have gone to another state without the tax cut.

As of September coal production was down five percent from the same time period last year. An innovative coal-drying process project is being tested and if successful Montana's coal marketability could strengthen under any new legislative action.

Several mining operations indicate strong development progress. The first U.S. platinum and palladium mine in south central Montana was given the green light in August to proceed with construction of an ore concentrating mill and other mine support facilities. The work force for the construction phase should peak at about 250 employees with mining employment around 200.

After a three-year shut down, the first load of copper concentrates was shipped out of Butte to refineries in Japan, Korea, and Taiwan. The new mine owner is also shipping molybdenum concentrates to markets in England and Europe. The mining firm is nearing its employment goal of 300.

A gold and silver mining operation in Fergus County is planned. The underground mining facility has past production history, primarily

between 1885-1895. Gold mining is expanding throughout the Northwest. Future production is expected to double the current output in two years. The first U.S. gold coin to be minted in more than a half century went on sale in October and will aid the demand for gold.

Montana's wood products plants showed an increase in production for the first half of 1986. The year's production is up four percent but employment in the mills is down four percent from the 1985 figures. The drop in employment reflects a continuing industry trend toward mechanization, as well as changes in types of products and size of logs.

A Missoula particle board plant plans to expand its operations by 50 percent. The state Air Quality Bureau approved the expansion plans as they determined the increased pollution won't spoil the county's clean-up efforts. The expansion will create 40 new plant jobs and add about \$10 million a year into the local economy.

An Indian tribe wants to open a high-efficiency sawmill near Dixon. The facility would employ 21 millworkers and 36 loggers at peak production. The mill would supply a specialty market for 2x2 and 1x2 pieces of lumber. It would also produce kiln-dried products for such things as railing supports, shelf supports, and furring for finishing interior masonry walls.

The aluminum plant located in Columbia Falls completed its first year under the semi-worker ownership operation and management noted the performance as profitable. The aluminum plant was donated by the previous owner to the new management and the 800-member work force. The company is a free-lance processor of alumina, and is currently operating at full capacity under a pair of agreements with mining companies based in Norway and Australia. A similar arrangement is being tried at an aluminum smelter in The Dalles, Oregon.

A major grocery store plans to move its Great Falls division head-quarters to Salt Lake City. The reorganization efforts could result in about 150 job losses for Great Falls. The warehousing operation will remain in Great Falls. The firm recently built a large grocery store in Great Falls.

Large chain general merchandising stores continue to develop in the state's larger cities. This is part of a national pattern of expansion. In the third quarter, a major shopping center opened in Kalispell.

A national surveying firm reported that Montana's residential construction activity through July is down 11 percent. Nonresidential and nonbuilding (i.e., highway and utility) construction declined 24

percent from the previous year. Of the six largest cities, only Missoula's building permits showed more residential development than last year and only Great Falls had a greater commercial and industrial construction value than last year.

Major construction projects are planned for Malmstrom Air Force Base to renovate several facilities that would be used by the base's new refueling mission. As much as \$60 million will be spent over the next three years for support facilities for the mission of 16 KC-135R Stratotankers. Congressional approval for the funds has to be finalized, but nearly \$8 million appears to be assured for construction work in fiscal year 1987. Malmstrom is one of the front-runners for the Air Forces's new Midgetman missile sites.

The Consumer Price Index (CPI) measures changes in prices of goods and services in major expenditure groups. The CPI for Urban Wage Earners and Clerical Workers (CPI-W) covers about 40 percent of the total noninstitutional population. The CPI for All Urban Consumers (CPI-U) covers about 80 percent of the total noninstitutional population, including wage earners and clerical workers, salaried workers, the self-employed, retirees, and the unemployed.

#### TABLE VII-A

#### UNEMPLOYMENT INSURANCE: CLAIMS TO PAYMENT

Many of those persons who become separated from their jobs enter our local Job Service offices for two reasons: to seek employment and to claim unemployment insurance (UI) benefits. Claimant wage credits obtained from insured employers are examined to determine if the claim meets monetary eligibility requirements for UI benefits and, if so, for how much per week is the claimant qualified. Monetarily eligible claims are subsequently segregated according to criteria for establishing which party (claimant or employer) was most responsible for the job separation in question. Claims for job separations resulting from claimant actions (issues) are further subjected to the test of whether or not an individuals' reduction in his potential benefit duration is warranted. If otherwise eligible and if availability criteria continue to be complied with throughout his actual unemployment duration, weekly benefit payments will commence with the claimant's second week of unemployment (a waiting week must be served under Montana law). The number and amount of such payments by county are shown in the table on the following page. Interstate payments in the table refer to payments made to individuals who now reside in other states but who had established wage credits in Montana based employment. Amounts shown in the table are financed through employer taxes paid to the Montana UI Trust Fund Account.

### SOURCES OF DATA

- S-1. Prepared by the Montana Department of Labor & Industry, Research and Analysis Bureau, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics (BLS). LAUS data (Local Area Unemployment Statistics program) are adjusted to the Current Population Survey benchmark and are the official BLS approved series that are used to allocate Federal funds and determine eligibility for Federal assistance programs. This series represents employment and unemployment by place of residence and are not comparable to the place-of-work industry employment series (CES data). Workers involved in labor disputes are counted as employed. Total employment in the labor force also includes agricultural workers, unpaid family workers, domestics, and self-employed.
- S-2. Prepared by the Montana Department of Labor and Industry, Research and Analysis Bureau. The unadjusted unemployment rate is prepared by the LAUS program in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics. The seasonally adjusted rate is an unofficial series and is provided only as an informational economic time-series.
- S-3. Prepared by the Montana Department of Labor and Industry, Research and Analysis Bureau from LAUS data. Data for Congressional Districts, Service Delivery Areas and Labor Force Areas are calculated from the official data series by summing up employment and unemployment for the appropriate counties involved and calculating an unemployment rate from the summed data for each area.
- Prepared by the Montana Department of Labor and Industry, Research and Analysis Bureau, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics. Data from the CES (Current Employment Statistics) program represents employment by place-of-work and cover full-time and part-time employees who worked during or received pay for the payroll period that includes the 12th of the The data exclude the self-employed, volunteers, unpaid family workers, and domestic workers. Persons on sick leave, vacations, or holidays, and being paid for that period by their employer, are considered employed. Payroll and worker-hour data are collected for production and related workers in manufacturing industries, nonsupervisory workers in private service-producing industries, and construction workers in construction industries. The earnings figures are "gross" figures; that is, they reflect changes in wage rates, shift differentials, and premium pay for overtime work. The hours figures relate to the hours for which pay was received; this is different from scheduled or standard work hours.

- S-5. Tabulations produced by the U.S. Department of Labor, Bureau of Labor Statistics and reprinted by the Montana Department of Labor and Industry, Research and Analysis Bureau for informational purposes only. This is a national data series because Montana data is not available.
- S-6. Prepared by the Montana Department of Labor and Industry, Research and Analysis Bureau from Unemployment Insurance administrative records and is produced for informational purposes only.
- S-7. Prepared by the Montana Department of Labor and Industry, Unemployment Insurance Division to meet federal reporting requirements (ETA 5159, DE 230, and ETA 2112 Reports) and is reprinted by the Research and Analysis Bureau for informational purposes only.
- S-8. Prepared by the Montana Department of Labor and Industry, Unemployment Insurance Division and is reprinted by the Research and Analysis Bureau for informational purposes only. (DE 230 Report.)
